

## ABSTRACT OF THE DISCLOSURE

5

An improved condom accessory that maybe used with or without a condom that absorbs and eliminate sperm, comprising a mixture of prepolymer, spermicide, water and/or medication, with said condom accessory having means of strengthening mesh material embedded into the body. Various methods of attachment are used to securely hold the condom accessory in place, to prevent dislodging. In case dislodging occurs the condom accessory has a safety string as a method of retrieval from the women's vagina.
